

CV Builder — Frontend Testing & Improvement Report

Prepared ahead of resubmission to CodeCanyon

Tested on: aicvbuilder.wasimdev.com

1. Purpose

Our previous CodeCanyon submission received a hard rejection. Envato's stated reasons were: "the item does not offer enough unique value compared to existing items, and there are issues with both the design and the code." Hard-rejected items cannot be resubmitted, so this report documents what we found while re-testing the admin panel and the CV builder itself, ahead of building and submitting a new, clearly differentiated item.

Issues below are grouped by severity. Critical and High items should be fixed before any resubmission is considered — these are the kind of visible bugs and inconsistencies a reviewer (or a paying buyer) will notice within the first few minutes of using the product.

Screenshots are placed directly under the issue they illustrate, so it's clear at a glance which screen and which detail each point refers to.

2. Testing Notes

Screenshots were captured across two sessions. In the first session (Screenshots 1–8) the header clock on every page reads “December 31, 1969 4:00 PM” — the Unix epoch fallback date. In a later session (Screenshots 9–10) the same header shows the correct current date/time. This means the bug is intermittent rather than constant, which makes it more important to find the root cause (likely a date object being instantiated from an unset/invalid timestamp on first load, e.g. `new Date(undefined)` or `new Date(0)` before the real value is available) rather than assume it “just needs a refresh.”

3.1 Leftover branding/config from a different product [CRITICAL]

- Core Settings → Mail Configuration (Screenshot 7) shows mail.username and mail.from.address set to jobtap@techtrack.online — a different product name (“JobTap”) and domain than CV Builder.

Screenshot 7 — Core Settings — Mail Configuration referencing a different product's address.

- This is a strong signal the config was copied from another project without being updated, and it will look unprofessional to a reviewer or buyer inspecting settings.
- For a CodeCanyon item, this screen should ship with placeholder/example values (or be blank), since the buyer is expected to enter their own SMTP credentials — not see what looks like the seller's personal mailbox.

3.2 Pricing copy is mathematically wrong [CRITICAL]

- Plan Management (Screenshot 6) and the public Payment Plans page (Screenshots 8 & 10) both price the Monthly Plan and Quarterly Plan at \$15.00.

This screenshot shows the 'Plan Management' interface in the CV Builder admin panel. It features a sidebar with navigation and support links, a search bar, and a table of active plans. The table lists three plans: Quarterly, Weekly, and Monthly, all with a price of 15.00 USD. The footer indicates the version is v1.23.0.

ID	Plan Name	Price	Interval	Features	Status	Created	Actions
#3	Quarterly Plan This one is a Quarterly plan	15.00 USD	Every 3 months	• Get Unlimited Access to our website	Active	Jul 24, 2026, 01:14 AM	
#1	Weekly Plan This one is a weekly plan	5.00 USD	Every 1 week	• Get Unlimited Access to our website	Active	Jul 24, 2026, 01:14 AM	
#2	Monthly Plan This one is a Monthly plan	15.00 USD	Every 1 month	• Get Unlimited Access to our website	Active	Jul 24, 2026, 01:14 AM	

Screenshot 6 — Plan Management (admin) — Monthly and Quarterly both priced at \$15.00.

This screenshot shows the 'Choose Your Plan' interface in the CV Builder admin panel. It features a sidebar with navigation and support links, a heading 'Choose Your Plan' with the subtext 'Select the perfect tier for your needs and budget', and three plan cards: Basic (\$5.00 Weekly Plan), Professional (\$15.00 Monthly Plan, marked as 'RECOMMENDED' with a 'Save 25%' badge), and Premium (\$15.00 Quarterly Plan, marked as 'Save 67%'). Each card includes a 'Choose' button. The footer indicates the version is v1.23.0.

Screenshot 8 — Payment Plans (admin view).

Screenshot 10 — Payment Plans (regular user, later session).

- Despite being the same price, the Quarterly Plan is labeled “Save 67%” — that claim can't be true if quarterly and monthly cost the same.
- Either the Quarterly price needs correcting (e.g. it should be priced per-3-months at a discount to the monthly rate) or the “Save 67%” badge needs to be removed/recalculated. As written, this is a visible logic bug on the page buyers will use to decide whether to pay.

4. High-Priority Functional/UX Issues

4.1 Multi-page CV export/rendering breaks across a page boundary [HIGH]

- Confirmed with a freshly-built 2-page CV and again after applying a template — same result both times.

Screenshot 11 — CV preview (cv-generate/35) — a large blank gap appears between the Education entry and the Skills section near the page split.

Screenshot 12 — CV preview — the “Key Achievements” block for the Frontend Developer entry renders twice (once cut short, then again in full) around the page break.

- When a job entry's “Key Achievements” bullets fall near the page break, content is duplicated/misaligned across the split — the entry re-renders incompletely on the next page instead of flowing cleanly.
- Only CV Builder templates should be shown in the template picker; during testing, entries with no template applied still displayed rendering artifacts. Confirm the picker and the renderer are actually in sync.
- This is the single most reviewer-visible “design” problem in the product — it should be fixed and then stress-tested with deliberately messy data (5 jobs, 12 skills, 3 projects, 2 certifications, 2 pages) across every template before resubmission.

4.2 No way to save a duplicate / versioned copy of a CV [HIGH]

- Only a single Save action exists in the CV editor; there is no “Save as copy” or duplicate option.
- This was flagged directly during testing: needed so a user can keep one CV and branch a tailored copy for a different job application without overwriting the original.
- Resume duplication and version history are both worth adding as core features — they're inexpensive to build and directly address the “not enough unique value” rejection reason by making the product feel more complete than a plain CV form.

4.3 Recent CVs are indistinguishable from each other [MEDIUM]

- Both the admin-facing and user-facing Dashboards (Screenshots 1 & 9) list several entries all titled “My Resume” with no distinguishing detail beyond the timestamp.

Screenshot 9 — Dashboard (regular user, later session) — header date is correct here, but every CV is still titled “My Resume.”

Screenshot 13 — Recent CV list — five entries in a row all titled “My Resume,” distinguishable only by their creation timestamp.

- Once a user has more than two or three CVs, there's no way to tell them apart at a glance.
- Consider auto-generating a descriptive default title (e.g. from the role/company entered) or prompting the user to name each CV on save.

5. Minor Polish Issues

- Upload/Build page: the “Recent CV” card's button is labeled “Check,” which doesn't describe what it does. Rename to something explicit, e.g. “View Recent CVs.”

Screenshot 2 — CV Builder landing / upload page.

- Manage Users: the toggle icon under Actions has no label or tooltip, so it's unclear whether it activates, deactivates, or deletes a user. Add a label and a confirmation step.

Screenshot 3 — Manage Users (admin).

- Plan Management: plans are listed out of ID order (Quarterly #3, Weekly #1, Monthly #2). Sort by ID or by price so the table reads predictably. (See Screenshot 6 in Section 3.4.)
- Footer version string “v1.23.0” is visible on every admin page — fine for internal QA, but worth hiding or making configurable before this is packaged as a buyer-facing item.

6. Resubmission Strategy (Summary)

The full strategy notes are attached separately, but the key points to act on before resubmitting:

- Lead with what's different: AI-driven resume transformation, job-specific optimization, and OCR import from scanned CVs — not just “AI CV builder with templates,” since that alone won't stand out among the 170+ existing resume-builder items.

- Add the missing must-have features: multiple resume management, duplication, version history, and reliable one-click template switching.
- Cut the template count if needed and make every remaining template hold up under messy real-world data, on both 1-page and 2-page resumes, with and without a photo.
- Run a dedicated code/security pass before packaging: no hardcoded API keys or credentials; buyers use their own AI API key, file upload validation, per-user authorization so no one can access another user's CV, and rate limiting on AI endpoints.
- Rewrite the documentation to cover installation, AI configuration (with cost explanation), OCR setup, template customization, and PDF/DOCX troubleshooting — with screenshots.
