Website	awhitfield.dev

PROFILE

SUMMARYMARK. Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged. Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

EMPLOYMENT

Jan 2011 — Present

Senior Engineer Role 1

Employer Number 1 Limited

Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged. Engagement marker ROLEDESC1.

- Achievement BULLET1x0 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET1x1 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET1x2 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET1x3 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET1x4 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

- Achievement BULLET1x5 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

Jan 2012 — Dec 2013

Senior Engineer Role 2

Employer Number 2 Limited

Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged. Engagement marker ROLEDESC2.

- Achievement BULLET2x0 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET2x1 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET2x2 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET2x3 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET2x4 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET2x5 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

Jan 2013 — Dec 2014

Senior Engineer Role 3

Employer Number 3 Limited

Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged. Engagement marker ROLEDESC3.

- Achievement BULLET3x0 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET3x1 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET3x2 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET3x3 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

- Achievement BULLET3x4 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET3x5 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

Jan 2014 — Dec 2015

Senior Engineer Role 4

Employer Number 4 Limited

Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged. Engagement marker ROLEDESC4.

- Achievement BULLET4x0 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET4x1 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET4x2 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET4x3 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET4x4 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET4x5 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

Jan 2015 — Dec 2016

Senior Engineer Role 5

Employer Number 5 Limited

Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged. Engagement marker ROLEDESC5.

- Achievement BULLET5x0 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET5x1 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET5x2 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

- Achievement BULLET5x3 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET5x4 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET5x5 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

Jan 2016 — Dec 2017

Senior Engineer Role 6

Employer Number 6 Limited

Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged. Engagement marker ROLEDESC6.

- Achievement BULLET6x0 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET6x1 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET6x2 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET6x3 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET6x4 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.
- Achievement BULLET6x5 — Delivered measurable improvements across the platform by profiling hot paths, removing redundant network round-trips and introducing a caching layer that cut median response time substantially while keeping the public contract unchanged.

EDUCATION

Sep 2008 — Jul 2009

MSc Advanced Computer Science

University of Manchester

Subjects: Distributed Systems, Machine Learning

Grade: Distinction

- EDUBULLETA thesis on consensus protocols
- EDUBULLETB teaching assistant

Sep 2005 — Jul 2008

BSc Computer Science

University of Leeds

Subjects: Software Engineering

Grade: First Class Honours

SKILLS

- TypeScript
- React
- Node.js
- PostgreSQL
- Kubernetes
- Terraform
- GraphQL
- SKILLKEPT

LANGUAGES

- English (Native)
- French (Fluent)
- German (Intermediate)

HOBBIES

Long-distance running · Chess · HOBBYMARK woodworking

CERTIFICATIONS

CUSTOMPARA holder of several **cloud certifications** and *security accreditations*.

- CUSTOMLI1 AWS Solutions Architect & Professional
- CUSTOMLI2 Certified Kubernetes Administrator

SPEAKING

CUSTOMH3 Conferences

CUSTOMPARA2 Regular speaker on platform topics.
